Affordable Access Control

Many businesses find it critical to control access into their facilities. Medical offices need to insure that records are secure, schools need to protect our precious children, government agencies need to make sure the right people are in and the wrong people are not… there are literally thousands of applications.

The best product is one that can address needs of all sizes, and that product is Net2 by Paxton Access.

Net2 is a PC based system that can control one door- or hundreds. The system supports up to several thousand users. It integrates with IP cameras such that a person accessing a door will trigger a recording of their entry on the IP video surveillance system. There are many other features built in to the Net2, which compares very favorably to systems costing much more.

In the example shown, the Net2 PC and communications converter (1, 2) can be located at a desk. Here events and auditing, as well as card/key FOB activation can easily be administered. The PC is connected via your network to readers (3) at critical doors in your office.

Net2 is a very flexible and feature-rich access control product, but it's not the only one out there. So why Net2 by Paxton? Simple.

- Paxton is so confident that their Net2 will solve customers' needs that they provide a 5 year warranty.
- Unlike many other systems, Net2 has no seat licenses or other unexpected costs.
- Net2 gives you free software upgrades, so tomorrow's future features will be available to you without costly expenditures.
